

ST122 Rice Husking Stoner

In the countries of ASEAN and Africa, numbers of rice farmers are spending hours removing stones by hands after they sun-dry their rice. However, still there are small stones mixed in the rice which cause a failure in the milling machine or its spare parts to be replaced early. To solve this problem, Kanryu developed a machine to remove stones from sun-dried rice. By releasing farmers from stone removing process, it contributes to labor saving for rice farmers. By removing stones before milling process, it prevents a damage to milling machines. Kanryu's Rice Husking Machine makes possible to provide the quality safe rice.

<p>Single-phase Tank Capacity Operating Capacity</p>	<p>220V Motor Unhulled rice 20kg/ Brown rice 30kg 280 ~ 330kg/1hr.</p>
--	--

A detachable sorting net shall be set before operating.
The net can be selected either for Indica rice or for parboiled rice

Rice Husking
Stoner movie

① Dry landscape of paddy due to sun drying, which is common in African countries
Place the paddy directly on the concrete and let it dry.

② Every single grain of dry paddy is packed in a bag, but foreign matter that had fallen on the concrete at this time is mixed in with it.

③ A lot of pebbles are mixed in the paddy

④ Remove foreign matter (pebbles) in the paddy
Destoner ST122

⑤ Stone removal work is easy and removes all foreign substances (pebbles)
